Dodge

杰拉尔德 R 道奇基金会一直为教育事业、艺术和环境提供资金援助。这项永久性的任务要求他们在新泽西莫里斯顿集团总部的内部设计要尽可能环保。为此，他们的办公楼以美国第三个生命之墙而闻名。一个三层楼高的花园种植着多种水耕物种，与办公楼的排水系统连接起来，吸收室内空气中的二氧化碳。这项操作随时被监控着。室内的每一个细节都是可持续性的设计，以反映公司的精神主旨以及设计和环保材料结合的正确性。

The Geraldine R. Dodge Foundation grants funding for projects on education, the arts and the environment. Their sustainability mission demanded the greenest interiors for their new corporate headquarters in Morristown New Jersey. For this purpose, their office spaces features the third bio-wall built in America. A three story high vertical garden planted with hydroponic species which is connected to the exhaust system of the building and evacuates the CO₂ for a cleaner indoor air. This operation is monitored constantly. Interiors have been highly detailed with sustainable finishes to reflect the spirit of the foundation corporate ideals and the correct marriage between design and environmentally conscious materials.
